
The second meeting of 2019 season will be on
our usual venue of

, it starts at 8pm sharp in

.
[Directions can be found here.](#)

In February we hold our special _____ and this year we are
really lucky to have

from

along to give us our talk. Alan will be giving us a talk titled '

.

Professor Alan Fitzsimmons is one of the top Astronomers in the U.K and it will be great to welcome him back to the society. Oumuamua is the name given to the first interstellar object that was discovered just over a year ago, passing through our solar system. It will be really interesting to hear Alan's take on this object as not a lot is known about it!

I am an astronomer in the QUB Astrophysics Research Centre. My primary research interests are in performing observations of minor bodies in our solar system, comets and asteroids. These studies are generally based on observations performed on the UK supported telescopes in the Canary Islands (ING) and Chile (ESO). I am also a member of the WASP consortium which has built and operates the SuperWASP facility on La Palma, and the UK Pan-STARRS Science Consortium.

Please note: Under 16's are very welcome but due to our child protection policy, we ask that they are accompanied by an adult

As always we will have refreshments available after the meeting, a donation bucket is available at the door if you wish to support us in our work!

Hope to see you all there!
